

Reveal is an open-source digital global good that enables country governments and implementing partners to use geospatial data and technology to efficiently and effectively microplan and then deliver life-saving intervention campaigns.

## General Details

### PRIMARY USERS:

Reveal users include government and implementers of health programs who are involved in the planning/microplanning and delivery of health interventions. This includes central-level ministry of health staff, as well as district based managers. End users of the mobile client include field teams, community health workers, or community drug distributors.

### REACH OF TECHNOLOGY:

Reveal is currently being actively used, or has been used recently in the following countries: Mali, Senegal, Nigeria, Kenya, Angola, Zambia, Namibia, Mozambique.

### LANGUAGES:

English, French, Hausa, and Siamese/Thai

### TYPE:

Software Application

### OPEN SOURCE LICENSE:

Apache 2.0

## Access Information

### SOURCE CODE

<https://github.com/akrosinc>

### WEBSITE
